

Katedry genetiky a biochémie PriF UK
a občianske združenie *NATURA*

Vás pozývajú na 128. prednášku v rámci Kuželových seminárov:

Dr. Jaroslav Ferenc

Developmental Biology Unit,
European Molecular Biology Laboratory, Heidelberg, Germany

FROM CNIDARIANS TO OTHER CREATURES: INVESTIGATING THE PRINCIPLES OF BUILDING ANIMAL BODIES

ktorá sa uskutoční **26. marca 2024** (utorok) o **16:30**

v miestnosti CH1-222 Prírodovedeckej fakulty UK

Mgr. Jaroslav Ferenc, PhD.

2022 - present	Marie Curie & EIPOD Postdoctoral Fellow European Molecular Biology Laboratory, Heidelberg (DE)
7/2019 - 8/2019	Visiting Scholar Kavli Institute for Theoretical Physics, UC Santa Barbara (US)
2016 - 2022	PhD Student Friedrich Miescher Institute for Biomedical Research, Basel (CH)
2014 - 2016	MSc Student Comenius University, Bratislava
7/2013 - 9/2013	Research Intern Institute of Science and Technology, Klosterneuburg (AT)
2011 - 2014	BSc Student & Research Intern Comenius University, Bratislava

The astounding diversity of animal body plans naturally suggests a corresponding diversity in the underlying developmental processes. However, the toolkit for building bodies from cells is surprisingly limited. Leitmotifs such as tissue folding, stretching, lumen formation, and organizers keep recurring over and over. What sets various body plans apart are rather the combinations, timing, and locations of these processes. Cnidarians, with their basal evolutionary position, simple body architecture, and amenability to experimental manipulations, provide a unique system for investigating the fundamental principles of building bodies common to all animals. In this talk, I will highlight two such instances from the freshwater polyp *Hydra* and the sea anemone *Nematostella*, focusing on the regulation of body parts development.
